SMOOTHGO · AI TRAVEL PLANNER

Travel smart.
Skip the wait.

An AI-assisted travel planner that turns live crowd signals into a calmer, personal day plan.

Changchun Normal University | Southern Cross University | 2026

THE PROBLEM

The itinerary is not the hard part. The queue is.

A TYPICAL DAY

45

minutes in one queue

That can erase an entire stop from a short trip.

01

Time disappears

Travellers lose hours waiting, not exploring.

02

Plans break

Crowds, weather and opening hours change by the hour.

03

Apps answer the wrong question

Most show what exists, not what is worth doing now.

The opportunity: make the next decision, not another list.

OUR SOLUTION

A day plan that changes when the city does.

1 → 2 → 3 → 4

Preferences

Interests, pace, group and start time.

Live signals

Crowd pressure and expected queue time.

A real plan

A time-boxed route with travel and meals.

Replan

Swap the busy stop before the day is lost.

Optional: verified queue assistance where venue rules allow.

No ticket skipping. No priority access.

TARGET CUSTOMERS

Three travellers, one shared pain.

01

Independent travellers

Want flexibility without wasting the day.

Need: a better next decision.

02

Families

Need a realistic pace and fewer meltdowns.

Need: shorter queues, clearer timing.

03

Business travellers

Have short windows and high time value.

Need: a plan that protects the hour.

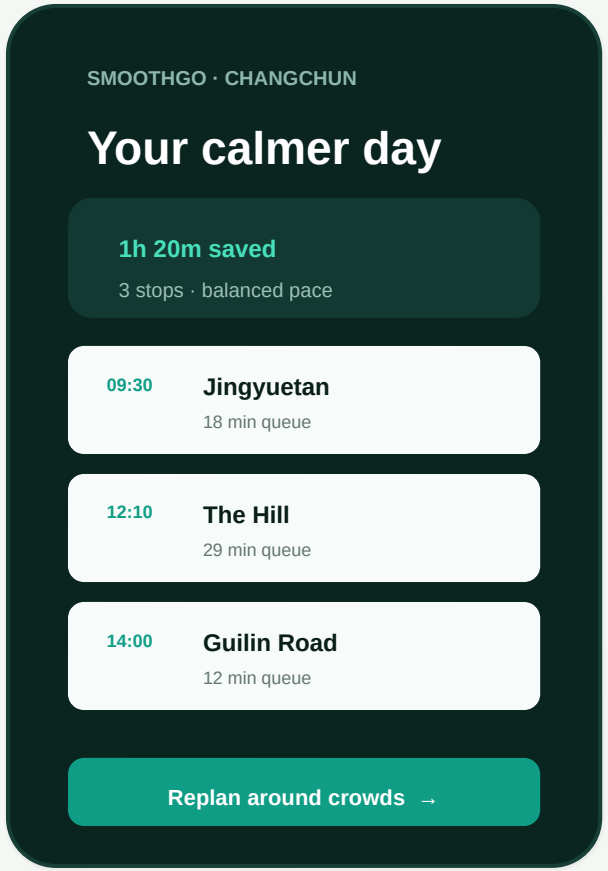

PILOT MARKET

Changchun, Jilin Province

Changchun → Xi’an → Chongqing → Changsha

PRODUCT WALKTHROUGH

From three preferences to a calmer day.

1. **Choose** — Interests, pace, group and start time.
2. **Generate** — A time-boxed plan with travel and meals.
3. **See live** — Crowd and queue signals for every stop.
4. **Replan** — One tap swaps the crowded stop.
5. **Optional** — Request verified queue assistance.

Live prototype · illustrative data · no real bookings

HOW IT WORKS

A transparent score, not a black box.

01 **Interest match**
Does this place fit what you came for?

02 **Crowd pressure**
How busy is it right now?

03 **Queue time**
How long will you actually wait?

04 **Travel + time fit**
Can you still finish the day calmly?

LIVE DATA
Venue signals + opt-in reports

SCORE
Explainable next-stop ranking

PLAN
Time-boxed route + reasons

Prototype: rule-based scoring with illustrative data. Production: live APIs + learned crowd forecasting.

Discovery is crowded. Decision support is not.

Platform type	What it does well	What it leaves open
Trip.com / Ctrip	Booking and discovery	Little dynamic replanning around queues
Meituan / Dianping	Local food and reviews	Fragmented across venues; not a full-day plan
Travel content apps	Inspiration	No live operational decision
Single-venue queue tools	One waiting list	No personalised, cross-venue itinerary

The gap: who tells you what to do next?

SmoothGo: cross-venue, queue-aware, dynamic.

BUSINESS MODEL

We earn when we save time, not when we add clutter.

15–20%

Queue-assist commission

A share of each completed request.

¥500+

Merchant promotion

Priority placement for partner venues.

¥9.9

Premium subscription

Advanced forecasts and multi-day plans.

PRICING EXAMPLE

30 min ¥10 · 60 min ¥18 · 90 min ¥26

Launch offer: first request free; off-peak discounts.

OPERATIONS AND PREMISES

Light asset, local first.

01

Premises

University incubator or co-working space. No physical stores.

02

Data

Venue partnerships, public tourism data and opt-in user reports.

03

Supply

Vetted part-time queue assistants with ratings and deposits.

04

Handoff

QR confirmation at the venue; platform settles automatically.

No stores. No fleet. No ticket inventory.

Compliance stays in the design.

Start where the queue is visible.

1	**Short video**	“How long is the queue at ___ right now?”
2	**QR at venues**	A useful tool at the exact moment of need.
3	**Travel partners**	An add-on for independent travellers.
4	**Campus ambassadors**	Local trust and a low-cost first user base.

8-WEEK PILOT

10 venues · 1,000 users

ROADMAP

- **Changchun**
- Xi’an
- Chongqing
- Changsha

Prove one city before scaling.

FUNDING AND P&L

A lean pilot with a clear path to break-even.

Start-up budget

¥80,000

Funding sources

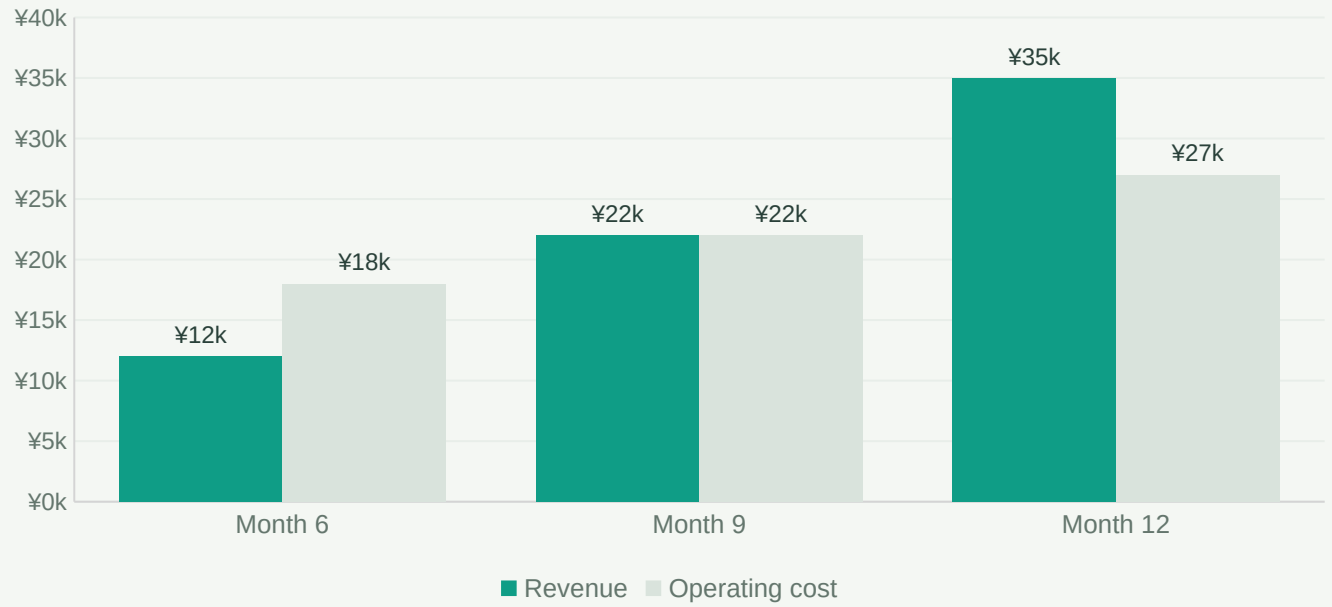

Team + university fund + local angel

Main costs

Development, APIs, marketing and ops

Break-even target

Month 9 after launch

Illustrative monthly economics (¥000)

Assumptions, not actual results. Verify the model before presenting.

CHALLENGES

The hard part is trust, not code.

Challenge	Mitigation
Crowd data is inaccurate at first	Start with user reports and visible queue estimates; partner with venues.
Paid queueing may be seen as unfair	Prioritise restaurants and non-strict queues; information-only in scenic areas.
Assistants may fail or behave poorly	ID verification, ratings, deposits and clear handoff rules.
Demand is seasonal	Add local-life use cases and off-peak promotions.

We start with information, not priority access.

Fairness is part of the product.

WHY IT MATTERS

A small shift in timing can change a whole day.

01

Clear pain

Waiting wastes the traveller’s most limited resource.

02

Simple promise

See more. Stand in line less.

03

Light model

Software, partnerships and local assistants.

04

Scalable path

One city, then a repeatable playbook.
